

# S1 Fig

## S1 Fig Examples of ear stage progression

Ear stage progression is shown for three untreated L2LMP1 transgenic mice (ID: 1312, 1328, 1341) and four NAC treated L2LMP1 transgenic mice (ID 1307, 1335, 1332, 1394). Mouse 1394 was in a cage treated from birth and did not progress beyond stage 2 in the study period (which was also observed in other mice treated from birth). Mice 1307, 1335 and 1332 were NAC treated from 1 month old. Note: phenotype stage reversal for both 1307 and 1332, followed by stage progression.
